

From Fragmentation to Automation

IFS ZERO IS THE AGENTIC EMISSIONS OPERATING SYSTEM FOR ASSET INTENSIVE INDUSTRIES

MEASURE

Built for Manufacturing Operations

- Automatic detection of emission sources from existing IFS asset records and equipment profiles
- AI agentic workflows to deliver operational efficiency across the full emissions workflow
- Ingest, process, and calculate emissions from high volume operational manufacturing data
- Fully integrated into IFS Cloud accelerating deployment timescales

Emissions data collected from source in hours, means that teams are reporting on real operational data.

DISCLOSE

Turn climate pressure into a strategic advantage by staying ahead of tightening regulation

GHG Protocol

Global emissions measurement standard. Need to establish baseline data and automate supply chain emissions tracking.

SBTi

Science Based Targets Initiative. A globally recognized framework for setting science-based emissions reduction targets aligned with climate goals.

CDP Reporting

Supports regulatory reporting. Aligns emissions disclosures to leading global sustainability frameworks with transparent, audit-ready reporting.

ISSB / IFRS S2

Climate-related financial disclosure. Must link sustainability metrics to financial reporting and business strategy.

Win more business and strengthen stakeholder trust with sustainability disclosures supported by accurate, verifiable data.

OPTIMIZE

End-to-end coverage for manufacturing operations

Agentic Workflow

AI agents collect, validate, and map data automatically.

Industry Intelligence Built In

Underpinned by multi-decades of industry expertise and IP built into the platform.

IFS Cloud Integration

Natively connects to IFS Cloud.

Intelligent Emissions Calculations

Strategic ClimaTiq partnership delivering trusted emissions factors and AI-powered emissions calculations.

Emissions Data from the Source

Every emissions figure links back to its source – meter, invoice, sensor, or operational system.

IFS Zero ensures manufacturers are making sustainability decisions within the same system as cost and throughput. With the right solution, climate pressure is converted into measurable margin improvement.

As asset intensive industries move beyond static carbon reporting toward operational decarbonization, buyers are gravitating toward vendors with strong data and operational foundations."

- Verdantix

You can't get to **zero** with estimates
