IFS Industrial Cloud Services

Scalable, cost-effective, and future-ready.

IFS

Does your business face regulatory pressures, unique data handling requirements, or specific operational uptime needs? Are you looking for a cloud service that understands the demands of your industry?

IFS Industrial Cloud Services empowers complex industrial enterprises with a cloud foundation that scales affordably to meet your demands, is cost-effective to maximize value, and is future-ready to ensure long-term success. This secure and reliable service, managed by experts, provides the specialized foundation your IFS Cloud solution requires, freeing you to focus on your core business.

Built for Complex Industrial Needs

Generic cloud services often fall short of understanding your business. IFS Industrial Cloud Services is architected with your sector's nuances in mind. The service addresses specific regulations, diverse usage patterns from transactional to data-heavy analytics, stringent data sovereignty and compliance needs, and varying operational uptime requirements critical to your operations.

Focus on Your Business, Not Infrastructure

By entrusting the complexities of the underlying cloud technology to IFS, your organization can concentrate on business and application-level tasks that drive value. Our experts handle the design, implementation, monitoring, and management 24/7, giving you operational certainty.

Operate with Confidence

Benefit from a stable foundation built for demanding industrial operations, letting you operate your business with confidence. Key advantages of IFS Industrial Cloud Services include:

Maximized value
Right-sized solutions ensure you pay only for the resources you need, maximizing value for your investment.

Robust security and compliance
Rely on industrial-strength security measures to meet compliance needs.

Scale with confidence
Scale your services to meet evolving business needs, from growing enterprises to large-scale operations.

Improved reliability
Benefit from a high-performance infrastructure for operational continuity.

Key capabilities

IFS Industrial Cloud Services delivers committed business outcomes through a range of service sizes and core features, further enhanced by optional add-ons tailored to your specific needs. IFS works closely with each customer to deeply understand your business, compliance, and performance requirements, ensuring you select the ideal combination of service tiers and add-ons to achieve your goals.

Scalable & Flexible

Service tiers and options designed to fit businesses of all sizes, adapting easily to your changing requirements.

Robust Security & Compliance

IFS maintains robust security and compliance by adhering to the highest industrial standards, demonstrated by certifications like ISO/IEC 27001:2022 and SOC 1 & 2. This commitment is reinforced through consistently applying industry best practices, annual independent penetration tests, and providing options to meet specific data sovereignty requirements.

High Performance & Reliable

Benefit from an infrastructure designed for high performance and reliability, minimizing downtime and maximizing application availability, running on the global Microsoft Azure cloud computing platform. Your data is safeguarded by multiple backup mechanisms providing layered protection, while optional high-availability services are available to organizations that require uninterrupted access to critical applications.

Expert Cloud Management and Support:

IFS handles the design, implementation, monitoring, and management of the entire underlying technology stack 24/7, ensuring operational certainty. Our model combines both proactive services – including system monitoring, automation, regular health checks, capacity planning, and maintenance to stay ahead of issues – with reactive support fully equipped to handle change requests, alerts, incidents, problems, and service requests, ensuring quick and reliable assistance when needed.

Optional Enterprise Add-ons

Enhance the Enterprise tier with options like additional non-production environments, increased storage entitlements, production-sized non-production environments, and support for specialized services such as Demand Planner Server support.

Optional Enterprise Premium Add-ons

Enhance the Enterprise Premium tier with options including high availability for ensuring mission-critical uptime, advanced data sovereignty options, premium location-based residency in specific regions, and IFS Cloud Build Place Service, which offers tailored build and deployment capabilities at scale.

Future-Ready Service

Boost efficiency and reduce operational risk with IFS Industrial Cloud Services, a future-ready foundation that also provides the essential cloud infrastructure to fully leverage the intelligent capabilities of IFS.ai. Delivering the required security, compliance, integration, and performance readily enables the full potential of IFS.ai – your systems are ready and data accessible, enabling real-time processing, automated insights, and predictive analytics – helping you drive greater value and outperform the competition.

Get Started with IFS Industrial Cloud Services

Leverage a robust infrastructure, cutting-edge technology, and industry-compliant practices to help your organization achieve operational excellence, maximize value, and drive innovation.
