Projects in IFS Cloud

Ensuring Predictable Complex Project Delivery with IFS Cloud

IFS

Organizations delivering complex projects face challenges like supply chain disruptions, volatile material costs, and staffing shortages, all of which threaten predictability and profitability. These capital-heavy businesses need the right solutions that help plan, schedule, and monitor projects with enhanced visibility, ensuring delivery aligns with timelines and budgets.

From ideation to delivery, IFS Cloud for Projects provides real-time insights across the project lifecycle, allowing organizations to identify and address issues proactively to keep projects on track.

Tailored for capital-intensive project-based industries IFS Cloud provides essential tools for resource allocation, cost tracking, risk management, and compliance—elements critical to predictable outcomes. Improve collaboration and keep all teams informed with visibility into suppliers, finance, and other business functions; an interconnected approach that supports accurate, real-time reporting, enabling stakeholders to make informed decisions and reduce safety or financial risks.

By utilizing IFS Cloud, companies streamline complex project processes, ensuring cost-effective, timely, and high-quality delivery despite external challenges.

Benefits

IFS Cloud provides an end-to-end solution designed to help you successfully manage and deliver even the most complex construction and engineering projects.

A single, centralized source of truth
Work with a real time view providing full visibility. Be confident of the status of any project against the Key Performance Indicators (KPIs).

Enhance Project Control
Get real-time insights into costs and hours logged, and quickly generate project schedules to boost productivity and minimize downtime.

Achieve More Predictable Outcomes
With AI and machine learning, forecast potential delays in payments, improving cash flow and ensuring predictable revenue.

Align Project Delivery with Strategic Goals
Ensure projects are delivered in-line with the requirements and goals of wider programs or strategic business objectives.

Key capabilities

Sales and Subcontract
Manage customer contracts across the entire sales contract lifecycle from bid to tender, completion and handover.

Engineering and Design
Apply and leverage product data to support engineering design, configuration control and follow up activities such as revision management.

Resource Management
Create and maintain resource structures that generate capacity for planning and execution processes.

Project Planning and Follow-Up
Get support from a comprehensive planning solution delivering a total view of all projects across the enterprise including subsidiaries or wider business entities.

Contract Change Management
Access a complete financial view to track, control and understand changes to contractual agreements.

Project Reporting and Invoice
Accurately track, report and analyze employee time and cost expenses for every project. Utilize AI generated predictions to track potential late payments based on historic trends.

Project Financial Control
Control project budgets and forecasting for both cost and revenue. Experience greater visibility and predictability of future cash inflows and hours for modified items.

Risk Management
Capture and analyze project risks. Proactively plan and put steps in place to remove the risk entirely or reduce likely impact.

Project Manufacturing
Plan and execute the project plan using manufacturing processes such as make-to-order (MTO) and configure-to-order (CTO).

Construction and Installation
Utilize a comprehensive solution to design and deliver complex assets specific to the engineer-to-order (ETO) process.
