

5 Reasons Airport Operators Choose IFS

With \$2.4T in global airport infrastructure investment needed by 2040 and record passenger volumes ahead, airports need more than basic enterprise software. They need a platform built for the unique challenges of aviation infrastructure.

5 Reasons to Choose IFS

1. Purpose-Built for Airport Assets

Manage terminals, runways, baggage systems, and airside equipment on one unified platform designed specifically for airport complexity - not retrofitted from manufacturing systems.

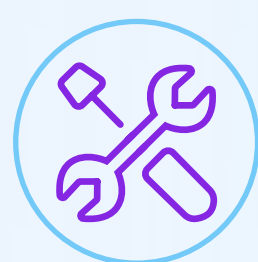

2. Transparent Capital Planning

Make defensible investment decisions across safety, capacity, and compliance priorities with full traceability from capital plan approval to value realization.

3. Real-Time Operational Intelligence

Anticipate equipment failures, coordinate rapid responses, and minimize passenger impact with predictive maintenance and operational dashboards.

4. Connected Workforce Platform

Standardize work execution across terminals, runways, and facilities with digital procedures and real-time collaboration - critical when staffing shortages persist.

5. Integration Without Disruption

Add visibility and coordination to existing systems without requiring wholesale replacement - keeping operations running while modernizing infrastructure management.

Why It Matters

Leading airports choose IFS because it understands aviation operations.

From managing safety-critical infrastructure to coordinating complex capital programs, IFS delivers the asset-centric foundation airports need to improve reliability and compliance without disrupting operations.
