

IFS Upgrade Journeys Powered by Boomi

**Boomi accelerates IFS customers' upgrade path to
"evergreen" enterprise software with IFS Cloud**

Streamline IFS Modernization From IFS Apps 7, 8, 9, 10 To IFS Cloud

Businesses today need to move faster, and work smarter. That's why it makes sense to upgrade to "evergreen" enterprise software, like IFS Cloud platform.

For IFS customers using the legacy IFS Applications ERP, the upgrade path to IFS Cloud is streamlined by Boomi. The Boomi intelligent integration and automation platform helps organization connect applications, data, and people to accelerate digital transformation – easing migration and making sure you have the flexibility you need for business growth.

Planning for Migration

Your ERP isn't just any old system. It's a core system with many dependencies. You'll need to examine the relationship between IFS and each solution or tool it interacts with before you can finalize the move. The Boomi platform bridges the gap between your existing IFS solution and the modern IFS Cloud platform. With Boomi in place, you can easily orchestrate and move data between legacy IFS, modern IFS Cloud, and other applications.

Boomi + IFS = Faster, Simpler, More Efficient Modernization

Boomi partners closely with IFS to help customers around the world say yes to faster, simpler, and more efficient integration among business units, customers, and partners. Together, we create highly connected and agile hybrid IT infrastructures. These support the rapid pace of modern business and its demand for constant innovation.

Using the Boomi platform to ease migration from IFS Applications to IFS Cloud allows you to:

- **Create a cohesive, self-service data platform.** Help developers, data citizens, and line-of-business users leverage the data they need from their legacy IFS Applications platform to support upgrading various business applications and processes to IFS Cloud.
- **Deploy integrations where you need them.** The Boomi Atom, a patented, lightweight runtime engine, allows integrations to be deployed wherever needed: in Boomi's Atom Cloud, in a public or private cloud, or on-premises. Seamlessly connect IFS Cloud, however you have it deployed, to your entire digital enterprise across on-premises and multicloud environments all the way to IoT and edge devices – and support exponentially growing data volumes while ensuring low-latency and high performance.
- **Realize faster time-to-value.** Boomi delivers 410% ROI and reduces integration development time by 65%, according to [The Total Economic Impact of the Boomi AtomSphere Platform](#), a commissioned study conducted by Forrester Consulting about the cost savings and business benefits Boomi delivers.
